

PROJECT PROFILE

PROJECT TYPE

UPS, Datacenter

PROJECT LOCATION

Middletown, CT

PRODUCTS & SERVICES

Alber BDS-256XL Battery
Monitoring System Installation &
Commissioning

Project Details

At this critical datacenter, the vented lead acid batteries had seen better days and were soon to be replaced.

Until the replacement batteries came in, the datacenter staff wanted to know right away if any particular cells would under perform and put their facility's load in harms way.

API was tasked with installing and commissioning this Alber BDS-256XL system on two different battery rooms. Each room consisted of three VLA battery strings, each string with 240 cells.
