

# PROJECT PROFILE

## PROJECT TYPE

Utility / Substation

## PROJECT LOCATION

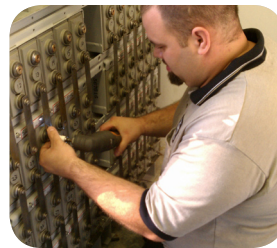

Independence, MO

## PRODUCTS & SERVICES

Battery, Charger, Rack & Spill  
Containment Installation

Battery Removal & Recycling

Battery Capacity Testing

## Project Details

This public power utility contracted API to provide a turnkey solution to retrofit their legacy backup power systems. A new battery building was purchased and outfitted for each of the three substations.

The substations were supplied with new batteries, racks, spill containment and chargers. New distribution feeds were required to be ran from the generator cabs as well.

After installation, the batteries were acceptance tested and the power loads were transferred to the new system. Later, the old batteries were de-commissioned and properly disposed of.
