

PROJECT PROFILE

PROJECT TYPE

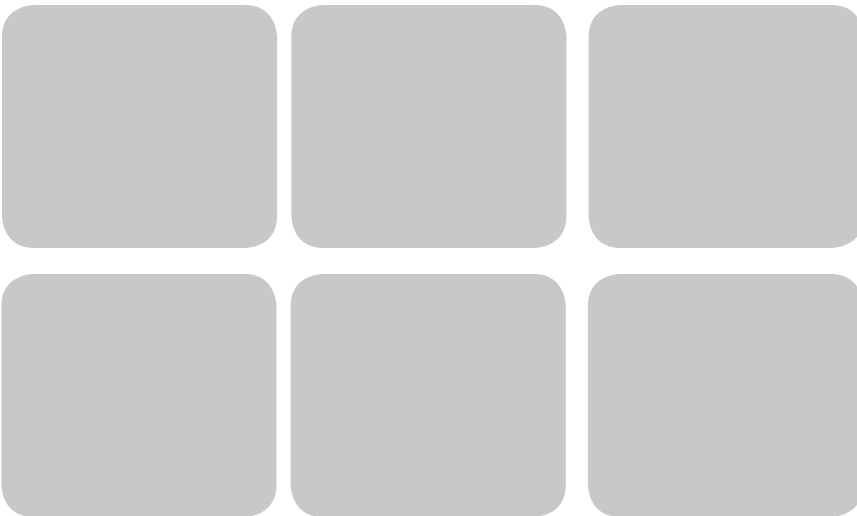

Substation / Utility

PROJECT LOCATION

Kansas City, MO

PRODUCTS & SERVICES

Battery Monitoring Installation

Contract Holder
Contract GS-07F-0668N

Project Details

At this public power utility substation, API installed and commissioned an Alber BDSU-120 Battery Monitoring system on this 120vdc, 60 cell vented lead acid battery system.

The client continually adds more monitoring systems to their network of battery strings. With over 300 battery strings in their infrastructure, it is challenging for them to stay on top of proper field IEEE battery maintenance.

Our battery monitoring systems simply give end users the piece of mind that their batteries' health is where it should be.
