

PROJECT PROFILE

PROJECT TYPE
Switchgear

PROJECT LOCATION
Hot Springs, SD

PRODUCTS & SERVICES
Battery Removal
Battery Installation
Battery Recycling

Project Details

At this unique site, an existing GNB Absolyte 120v VRLA AGM battery system was removed and replaced with an EnerSys 2DDm85-15.

The only access to the battery room is down a 10 foot "well", which made for a challenging work environment.

The old charger was also removed and replaced with an AT10 Series 100a filtered charger.

The old battery cells were properly recycled and disposed of per EPA guidelines.
